

Dedicated Floors is pleased to present our September, 2016 newsletter.

We are proud of our relationship with our parent company Certified Concrete. Our commitment is to set the bar of excellence for our trade. Servicing our customer needs to the highest possible level is what we strive for on a daily basis. Please take time to view our updated website at www.socalunderlayments.com for additional information on our services.

Project Spotlight

Project: MUSE, La Jolla. GC: Reno Construction.

Scope: Floors 1 thru 4, appx 40,000 s/f of interior space.

Reno Construction contacted Tom Klosterman of Dedicated Floors on this challenging, upscale, downtown La Jolla conversion from commercial to residential use. With subfloors out as much as 3" and limitations due to weight constraints in leveling the floor. Dedicated Floors helped to engineer a system to meet tight specification required for new flooring while addressing weight concerns by installing polystyrene foam below poured Duracap. Tom Klosterman and his crew surveyed the floors and set elevations throughout the course of construction. The floors were complete in 2 week's time to keep Reno's schedule ahead of time and ready for other trades.

Featured Product

Duracap by Maxxon

Dedicated Floors is a licensed applicator of Maxxon products. Maxxon not only started the industry, it continues to lead it with quality products, cutting-edge research and responsive customer support. Duracap was used at the above project to meet stringent specifications for leveling while providing a 3500 PSI floor ready for new framing the next day. Duracap does not require shot blasting and can be poured up to 10,000 s/f a day. Poured from a feather-edge up to 3" in a single lift makes Duracap the ideal underlayment for this project while being a very competitive option compared to other underlayments. Visit our website at www.socalunderlayments.com and click the products tab for additional info.

Dedicated Floor Systems

- Floor leveling systems to meet specific tolerances and PSI requirements.
- Gypcrete/lightweight floors for UL and sound rated assemblies.
- 25 year expertise in surveying floors and providing cost effective means to remedy subfloor challenges.
- Trained personnel and the right equipment to keep your project on a fast pace.
- Moisture Mitigation Systems.
